Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, 29-59, 66-70, 74, and 75, drawn to nucleic acid hybridization assays, methods for producing transgenic plants, transgenic plants, plant cells, seeds, genes, plant selection methods, gene expression methods, and cDNA libraries, classified in class 435, subclasses 6 and 410, class 800, subclasses 295 and 278, and class 536, subclasses 23.1, 23.6, and 24.1.
- II. Claims 12-19, drawn to methods for detecting levels of nucleic acid expression, classified in class 435, subclass 6.
- III. Claims 20-28, 76, and 77, drawn to nucleic acid molecular hybridization assays using multiple probes, classified in class 435, subclass 6.
- IV. Claims 60-65, drawn to methods of using plants in an assay method, classified in class 435, subclasses 4, 410, and 317.1.
- V. Claims 71-73, drawn to methods for identifying agents that modulate activity of plant stress-regulated gene regulatory elements, classified in class 435, subclass 6.
- VI. Claims 78 and 79, drawn to computer-readable media and programs, classified in class 702, subclass 20 and class 707, subclass 3.

The inventions are distinct, each from the other because of the following reasons. The plants, cells, and nucleic acids of Group I are materially different from and are therefore independent and distinct from the computer-readable media of Group VI. The methods of each of Groups I-VI may each be practiced independently of one another.

Claims 1-79 are drawn to nucleotides, nucleotide constructs, and/or methods requiring the use of nucleotides or nucleotide constructs that contain more than ten individual, independent, and distinct nucleotide sequences in alternative form. Accordingly, these claims are subject to restriction under 35 U.S.C. § 121 as outlined in 1192 O.G. 68 (November 19, 1996). This notice permits the examination of from one to ten independent and distinct nucleotide sequences in a single application based upon USPTO resources.

Art Unit: 1631

Applicant is required to select no more than ONE of the individual sequences for examination. The search of the no more than ONE selected sequences may include the complements of the selected sequences and, where appropriate, may include subsequences within the selected sequences (*e.g.*, oligomeric probes and/or primers).

Claims 1-57, 66, and 75-79 are drawn to, require, or mention compositions reciting different combinations of individual nucleotide sequences. Applicant is required to select one combination for examination. If the selected combination contains ten or fewer sequences, all of the sequences of the combination will be searched. If the selected combination contains more than ten sequences, the combination will be searched until one nucleotide sequence is found to be allowable. The order of searching will be chosen by the examiner to maximize the identification of an allowable sequence. If no individual nucleotide sequence is found to be allowable, the examiner will consider whether the combination of sequences taken as a whole renders the claims allowable. The identification of any allowable sequence(s) will cause all combinations containing the allowed sequence(s) to be allowed. See O.G. 68 (November 19, 1996).

It is noted here that claim 59 depends from non-existent claim 144.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

To search any two groups as outlined above would create an undue burden for the U.S. PTO because the searches of the non-patent literature are not only non-overlapping to any appreciable extent, but are also divergent in nature.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of

inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Martinell whose telephone number is (703) 308-0296. The fax phone number for Examiner Martinell's desktop workstation is (703) 746-5162. The examiner works a flexible schedule and can be reached by phone and voice mail. Alternatively, a request for a return telephone call may be e-mailed to <a href="mailed-to-james.martinell@uspto.gov">james.martinell@uspto.gov</a>. Since e-mail communications may not be secure, it is suggested that information in such requests be limited to name, phone number, and the best time to return the call.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward, can be reached on (703) 305-4028. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-4242.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
